## Planting seeds of discovery...

Fourth week of school! We harvested some Ag. station okra, GHS passion fruit and loads of local guavaberries. 6th & 7th grade started a lettuce experiment and are testing for the best location & grow medium for our greens including an in-ground test plot. Seeds of another type were planted this week with the beginnings of a pen-pal club with Namasagali school in the Kamali district of Eastern Uganda. All 6-9th graders wrote introductory letters. We share an ISU connection with this school and hope this partnership grows into long fruitful relationship.

Week of September 26-30, 2011
